Legume Legacy Summer 2024

We are very pleased to be involved with this project.

LegumeLegacy is a Marie Skłodowska-Curie Doctoral Network titled 'LegumeLegacy – Optimising multiple benefits of grass, legume and herb mixtures in crop rotations: modelling mechanisms and legacy effects'. This project brings together Principal Investigators and collaborators from 14 academic and industry partners from across Europe and one Canadian partner and aims to lead the way in transforming productive agricultural crop rotation systems.

Read the latest newsletter here, for news from the recent conferences, secondments and filed updates.
