

LegumeLegacy Spring 2025

The LegumeLegacy experiment enters the follow-on crop phase after at least 18 months of grassland phase. Read all about it in the latest newsletter.

In this issue:

- * The cereal phase begins for LegumeLegacy sites! Updates from our Swiss partner Agroscope.
- * Prasanth dives into the science behind nitrogen legacies and explores how high-tech PRS probes mimic plant roots to measure nutrient availability in soil.
- * New LegumeLegacy Paper Published.

LegumeLegacy is a Marie Skłodowska-Curie Doctoral Network - Optimising multiple benefits of grass, legume and herb mixtures in crop rotations: modelling mechanisms and legacy effects'. It aims to lead the way in transforming productive agricultural crop rotation systems and the 11 Doctoral Researchers will be trained to emerge as the next generation of leading researchers in this field.
